

Top 10 Qualities to Look for in a Process Systems Partner

1 PROVEN TRACK RECORD:

Check that your process systems partner has successfully completed projects like yours and in your industry.

2 A NETWORK OF KNOWLEDGEABLE ENGINEERING EXPERTS WITH END-USER EXPERIENCE:

Make sure your vendor has the proper credentials and real-life experience to anticipate problems and solutions.

3 COMMUNICATION:

Select a process partner that not only assigns you a dedicated project manager, but provides regular, clear communication on deliverables and timelines.

4 FLEXIBILITY:

Opportunities to improve your process will arise as you begin your project, so choose a partner that is willing to ask questions, learn, and work with you as your vision evolves.

5 UNDERSTANDS YOUR BUSINESS:

Look for someone who has a strong understanding of your industry, the problems you face, and can provide solutions to improve your process.

6 PROJECT MANAGEMENT:

Make sure your partner appoints one person to be responsible for all project communication.

7 AUTOMATION EXPERTISE:

Choose a partner that understands and builds your solution with automation from the start.

8 IN-HOUSE FABRICATION:

Select a process partner with in-house fabrication and engineering to complete your project smoothly, with less delays, and better communication.

9 FAT:

Check that your partner performs Factory Acceptance Testing to help identify and solve problems before installation.

10 ON-SITE COMMISSIONING & STARTUP SUPPORT:

Confirm with your vendor what guidance, training, and documentation they provide for commissioning.
